

Atlas Copco

Atlas Copco Dewatering pumps product range

www.atlascopco.com/dewatering-pumps

Welcome to Atlas Copco pumps booklet!

Atlas Copco designs and develops highly efficient and environment friendly dewatering pumps. Rich history combined product development experience spanning more than 100 years, we at Atlas Copco strive to develop product that best fits customer needs. The wide range of robust surface and submersibles pumps offers great performance and flexibility and are suitable for every dewatering application.

Index

Surface pumps

- Dry prime pumps (PAS range)
- Wet prime pumps (VAR range)
- Wellpoint centrifugal pumps (WEL range)

Submersible pumps

- Drainage pumps (WEDA D range)
- Sludge pumps (WEDA S range)
- Slurry pumps (WEDA L range)

Terminology

- Self priming

Dry prime pumps

PAS range

The complete PAS surface
pumps portfolio

The PAS range of fully automatic self-priming centrifugal pumps are considered the ideal solution for transporting or raising water with abrasive solids in suspension. They are used across multiple industries including construction and mine site dewatering, floodwater, stream diversions, sewage bypass and municipal applications. They can work with water that is clean or dirty as well as handle trash and fibrous materials. Thanks to features such as semi-open impellers and abrasion-resistant pump castings, this range has excellent solids handling capability.

Wet prime pumps

VAR range

The VAR range consists on centrifugal pumps, where the key is to have a simple system for first prime. The machine can, with a first water fill up, quickly evacuate the air from the suction and allow to flow the fluid with solid handlings in suspension. The equipment suits perfectly in medium construction application, bentonite pumping and portable emergency floods control.

Great for construction, general dewatering, drainage and emergency applications.

These self-priming centrifugal pumps are for applications where the main challenge is the difficulty to start the unit in tough conditions and difficult accessible areas.

Wellpoint centrifugal pumps

WEL range

The WEL range of fully automatic, rapid, self-priming pumps is designed for wellpoint applications with a high flow rate. The WEL ECO is capable of drawing significant quantities of air and maintaining a wellpoint system under vacuum, or draining an excavation, thanks to the semi-open impeller, which also makes it suitable for pumping liquids with solids in suspension.

The WEL PST model, high performed unit, is suitable for gravous applications when it is needed to work 24 per day, thanks to the strong efficiency that can guarantee a real fuel savings.

The automatic WEL TANK range is suitable for applications with changing ground water level and flow requirements. Being electric driven, it is very silent, energy efficient and suitable to work in residential areas.

Slurry pumps (WEDA L)

WEDA slurry pumps are designed for an extensive range of dewatering applications in abrasive media with high solid content, like in quarries, mines or Dredging.

⇒  ⇒
UP TO
DENSITY 1700kg/m³

 **SOLID**
HANDLING
20-60 mm

↶  ↷
DESIGN
BOTTOM SIDE
AND TOP
DISCHARGE

 PH values
from 2 to 10

EASY ACCESS

Efficient motor cooling with top discharge and side flow

EFFICIENT MOTOR

Electric motor insulation class H with PTC and Clicson thermal protection and service factor S1

ROBUST DESIGN

Heavy duty bearings to withstand shocks and overloads

REINFORCED SEALING

A double silicon carbide mechanical seal for duty application

HIGH ABRASION RESISTANCE

Thanks to the high-chrome wear parts

HIGHER SOLIDS HANDLING

Slurry pumps can handle solids up to 60 mm

SUSTAINABLE PERFORMANCE

High efficiency high-chrome agitator to lift settled solids

Other information

Installing a submersible pump

Hanging by rope
(Not by electric cable)

Seated on platform

Separated by strainer

Sunk

Salt tables

Self priming terminology

General requirement

Application: define the nature of the service, have a short description, try to define q.ty

Liquid pec

Info required:

- SG = specific gravity
- Viscosity
- Temperature
- Corrosive and/or abrasive properties
- Nature, percentage and maximum size of solid content

Flow

State whether total or per unit

Suction static head

- Type of condition > suction lift (90% of apps) – flooded suction conditions (10% of apps)
- Understand the distance between water surface and pump centre («eye of the impeller»)

Friction losses > focus on suction

Info required to dimension the right pump

- Pipe lengths
- Diameters
- Type of materials
- Fittings, elbows, valves

PRESSURE

Verify if standard app (1 atm) – if not understand what pressure we have (es. Pressurised tank to pump)

Discharge friction head

Info required to dimension the right pump

- Pipe lengths
- Diameters
- Type of materials
- Fittings, elbows, valves

Pressure head

Is end of the pipe discharging to atmospheric pressure, if not final pressure needed

Total head = Total discharge head – Total suction head

note: refered system (0 point) is pump centre – «eye of the impeller»

$TDSL = SSL + \text{Friction Loss}$
 $TDDH = SDH + \text{Friction Loss}$
 $TDH = TDSL + TDDH$

Friction losses are affected by length and size of pipework, bends, gate valves, strainer and velocity of flow. When SG (Specific Gravity) is different than $SG=1.0$ (Clean Water), it will also affect the Total Dynamic Head.

Main options for WEDA range

Discharge connections

We understand that you will have preferred equipment connections, so we offer four types. All can be mounted in either a vertical or horizontal position.

- Hose

- Storz

- ISO-G

- NPT

Level regulators

For easy control of water level by automatic pump switch-on/-off:

- Float switch

Zinc anodes

Specifically required for pumping water with a high concentration of salts such as sea water, brine, etc.

Low suction collar

To easily drain the water level down to the floor.

Hoses

Multiple hose options with a variety of end connections are available in different lengths ready in stock.

Epoxy coating

For additional protection against corrosion.

Parts and Service

Service paks

All-in-one box tailored to match your equipment. Our Preventive Maintenance Kits contain all the parts required for the equipment's scheduled maintenance program. These kits are easy to obtain and attractively priced. When the repairs are carried out by one of our certified technicians, your machine can achieve maximum productivity.

Service paks	Service intervals	Kits - What is included
	250 h	Oil filter, Oil drain washer
	500 h	Oil filter, Fuel filter, Air filter, Oil drain washer, Fuel - pre filter* V-Belt
	1000 h	Oil filter, Fuel filter, Air filter, Oil drain washer, Fuel - pre filter*, V-Belt*, Air filter safety cartridge*
	2000 h	Oil filter, Fuel filter, Air filter, Oil drain washer, Fuel - pre filter*, V-Belt*, Air filter safety cartridge*
	3000 h	Oil filter, Fuel filter, Air filter, Oil drain washer, Fuel - pre filter*, V-Belt*, Air filter safety cartridge*

*please refer to your machine manual or spare parts book

Pump parts

Atlas Copco pump parts such as for example wear and hydraulic parts are designed to withstand the toughest applications and ensure the promised performance.

Thanks to the material selection and optimized design, it increases the machine productivity while keeping the life cycle cost low.

- Wear resistant in toughest conditions
- Optimized design for minimized performance drop
- Low life cycle cost

Parts and Service

O-ring kit

The gasket kit or O-Ring kit contains the proper selection of gaskets to reseal the pump casing after a service intervention like changing an impeller.

Moreover, the kit offers the price benefit against the individual items and is the ideal solution to prevent leakages after the service.

Fluids

Original lubricants are the best way to protect your machine investment, by both maximizing uptime and by improving the resale value of your equipment. Atlas Copco lubricants have been especially engineered for your compressor to match our maintenance specifications and therefore provide optimal protection for your products. Our lubricants last longer and perform better.

	Paroil E Mineral lubricant		5l	1615 5953 00	Engine oil

Parts and Service

Seal kits

The seal kit contains the following parts

- Mechanical shaft seal
- O-ring kit

The seal kit is the proper selection of components for a mechanical seal change to ensure trouble free operation after service.

The high quality mechanical seals and gaskets are well selected to meet the quality requirements and its foreseen lifetime.

The Seal kits are available for the complete pump range and offers a price benefit against the individual items.

Instant Service Pack

The seal kit contains the following parts

- Mechanical shaft seal
- O-ring kit

The seal kit is the proper selection of components for a mechanical seal change to ensure trouble free operation after service.

The high quality mechanical seals and gaskets are well selected to meet the quality requirements and its foreseen lifetime.

The Seal kits are available for the complete pump range and offers a price benefit against the individual items.

Wear part kit

The wear part kit is a typical selection of components to bring the pump performance back to factory setup.

It is the ideal solution for a machine overhaul or refurbishment.

The wear part kits are available for the complete pump range and offers a price benefit against the individual items

Wear part kit - What is included	Impeller	Shaft key
	Wear plate	Impeller nut
	Wear plate gasket	Rear wearplate*
	Wear plate fixation

Fleetlink

FleetLink is an intelligent telematics system that helps optimize fleet usage, reduce maintenance cost, ultimately saving time and money. It allows you to manage your machines conveniently wherever you are, always having the latest fleet information at hand.

Fleetlink keeps you connected in an ever changing world, with state of the art digital monitoring tools. Remotely manage your machine fleet whether big or small. FleetLink keeps you connected to your job-site, machines and your team.

Getting connected is very easy! Fleetlink is comes with your machines as an option or can be retrofitted.

Contact with your Atlas Copco contact available packages, choose your package.

Hydraulic Characteristics

Affinity Laws :

There are certain relationship in existence which allows prediction of head and flow characteristic of pump when measured at different speeds and with different impeller diameter. These are called as Affinity Laws.

Effect of change in speed on pump performance.

When the speed of the of a centrifugal pump changes, the flow at any given point varies directly to the speed, the head varies to the square of the speed and power varies to cube of the speed. These relations are termed the affinity laws and can be expressed as follows:

$Q \propto N$ where Q = flow $H \propto N^2$ where H = head

$P \propto N^3$ where P = absorbed power N = speed (r p m)

Then for a given change in speed, taking suffix 1 as relating to known performance, and suffix 2 as the performance which is required we have:

$$\frac{Q_2}{Q_1} = \frac{N_2}{N_1} \quad \text{therefore} \quad Q_2 = \frac{Q_1 \times N_2}{N_1}$$

$$\text{and } \frac{H_2}{H_1} = \left(\frac{N_2}{N_1}\right)^2 \quad \text{therefore} \quad H_2 = H_1 \left(\frac{N_2}{N_1}\right)^2$$

$$\text{and } \frac{P_2}{P_1} = \left(\frac{N_2}{N_1}\right)^3 \quad \text{therefore} \quad P_2 = P_1 \left(\frac{N_2}{N_1}\right)^3$$

Effect of change in diameter of impeller.

The performance of a centrifugal pump can be varied by reducing the impeller diameter. The effect of impeller reduction has the following relationships, when the performance of a full diameter impeller is known.

$Q \propto D$ where Q = flow $H \propto D^2$ where H = head

$P \propto D^3$ where P = absorbed power D = impeller diameter

$$\text{therefore } \frac{Q_2}{Q_1} = \frac{D_2}{D_1} \quad \text{therefore} \quad Q_2 = \frac{Q_1 \times D_2}{D_1}$$

$$\text{and } \frac{H_2}{H_1} = \left(\frac{D_2}{D_1}\right)^2 \quad \text{therefore} \quad H_2 = H_1 \left(\frac{D_2}{D_1}\right)^2$$

$$\text{and } \frac{P_2}{P_1} = \left(\frac{D_2}{D_1}\right)^3 \quad \text{therefore} \quad P_2 = P_1 \left(\frac{D_2}{D_1}\right)^3$$
