

GENIEGRIPS PTY LTD

5 KIMBERLEY ROAD
DANDENONG SOUTH VIC 3175
AUSTRALIA

ABOUT THE COMPANY

GenieGrips Pty Ltd is an Australian owned and operated manufacturing company with nearly 40 years experience in the rubber moulding and bonding industry.

Our industry knowledge and experience provided the insights to design, patent and manufacture the GenieGrips range to solve the problem of forklift loads shifting, sliding and tipping in transport.

**OUR MISSION:
TO PROTECT PEOPLE AND
GOODS THROUGH THE
PROVISION OF FORKLIFT SAFETY
PRODUCT SOLUTIONS ACROSS
ALL INDUSTRY SECTORS**

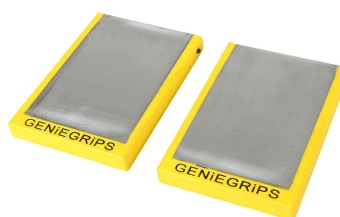

GENIEGRIPS FORKLIFT SAFETY PRODUCTS

Every year in Australia across all industry sectors 29% of workplace fatalities are caused by forklift accidents and AU\$21.8 Billion worth of products are damaged due to forklift loads shifting, falling, sliding or tipping off their tynes.

Until now there has been no universal product solution in the Australian and Global market place addressing these issues.

GenieGrips was specifically designed to address forklift load shift and provide safe, secure and protected product movement.

Our headquarters and manufacturing plant are in Melbourne, Australia, with warehouse facilities in California, USA and Amsterdam, The Netherlands. We have sales offices in Melbourne, Maastricht and London, with international distributorships around the World.

MATS

An anti-slip surface that prevents sliding in the event of fast movement or a sudden stop. GenieGrips® Mats use a secure lock-in hook mechanism that makes for quick and easy installation and removal.

CUSHIONS

Eliminate friction and absorb impact of the goods that may occur during lifting, loading and placing of loads. They are extremely easy to fit with magnets securing them on the forklift tyre carriage.

CAPS

Prevent the tyre from causing damage to your products during load movement. They are easy to fit and remove and provide an effective, inexpensive way of minimising instances of damage to your product.

LOADING MIRRORS

Eliminate critical blind spots in the drivers vision and gives a clear view of the tynes, reducing accidents, injury and damage to goods. Easily fitted to the mast, to reduce driver strain/injury.

Case Study: Chemicals and Lubricants

PPG Industries Australia

PPG is a global supplier of paints, coatings, optical products, specialty materials, glass and fiberglass. Through leadership in innovation, sustainability and color, PPG helps customers in industrial, transportation, consumer products, and construction markets and aftermarkets to enhance more surfaces in more ways than any other company. Their manufacturing, research and development facility in Victoria, Australia, produces automotive refinish, industrial coatings, packaging coatings, protective and marine coatings.

The Problem

Safety risk from hazardous goods sliding off tynes or puncturing of containers

PPG's facility supplies industrial, packaging, protective and marine coating to customers across Australia. These coatings are typically contained in metal and plastic drums and IBCs. Due to the large amount of products being moved throughout the facility, these drums and IBCs were occasionally slipping off forklift tynes or being punctured by forklift tynes. Spills of this nature were causing PPG loss of product and time and money to clean up the spills. In some cases, due to the toxic or hazardous nature of the coatings, the spill location would have to be quarantined until the location was completely cleaned and the hazardous material removed. It was recognised by PPG's management team that employees were also being exposed to potential harm from these spills

THE SOLUTION

GenieGrips® Mats offer superior grip.

PPG Industries in Clayton now use GenieGrips® Mats on their forklift tynes. The mats' compound rubber patterned surface provides over six times more grip than metal tynes. The square rubber tips of the GenieGrips® Mats protect against tynes puncturing the drums and IBCs containing PPGs coatings. This has eliminated spills and punctures of drums and IBCs from forklift tynes.

PPG are rolling out GenieGrips® Mats across all of their facilities in Australia and subsequently internationally.

"Using GenieGrips® Mats has stabilised the movement of IBCs on our forklifts and made stacking of IBCs easier. They have helped to eliminate IBCs sliding off forklift Tynes."

Hans Casperzs – OH&S Officer PPG Industries Clayton
