SmithCo MINE Series Side-Dump Trailers

SmithCo MINE Series trailers are designed for the mining, quarry and off-road sectors. Because of the wide variations of density of product it is difficult to show a “standard” spec sheet. These trailers are custom built to your needs. We size the tub to the density of your material so you can load them full and know you are at payload every time.

The drawing's shown below show some of our range of units. Single trailers range from 50 ton (45.4 metric ton) to 100 ton (90.7 metric ton) capacity. Trains are also available.
