Through investment in world class resources like Liberty Industrial's State of the Art High Reach Fleet of Plant and Equipment, Liberty Industrial is able to safely and efficiently deliver even the most technically challenging demolition projects.

Our team are experienced with the demolition of multi storey and high rise buildings, chimney stacks, masts, industrial structures such as power stations, oil refineries, and heavy mining infrastructure.

Liberty Industrial's state of the art fleet of plant and equipment includes a custom built Kocurek Ex1200 excavator weighing in at 200t that can carry a 7t attachment at 36m a 12.5t attachment at 30m or a 25t attachment at 20m, a second modified Ex1200 that can carry a 10t attachment at 20m, and two Volvo 48 tonne excavators fitted with a 3 stage high reach boom that can be configured for 24m or 26m of reach.

Liberty Industrial's high reach demolition excavators are fitted with a full range of demolition attachments including concrete crackers and shears for the demolition of concrete or steel structures, including our 12.5t shear and 12.5 concrete cracker.

The latest addition is a custom built Kocurek modified Hitachi Ex1200 High Reach Demolition Excavator weighing in at 200 tonne. Affectionately dubbed the Swiss Army Knife of demolition excavators, the machine has been designed with versatility in mind, equipped with a range of working heights and attachment sizes.

The 200 tonne custom built high reach demolition excavator boasts a four stage heavy demolition configuration that reaches 36 metres with a 7 tonne attachment, a three stage configuration to reach 30 metres with a 13 tonne attachment and a 20 metre two piece configuration with a 25 tonne attachment making it one of the world's most versatile demolition excavators.

The machine also has a dedicated telescopic front, reaching an impressive 60 metres with a 3.5 tonne attachment, making it the highest demolition excavator in Australia.
