Tomorrow’s leading companies in the mining sector

Powered by GlobalData’s thematic engine
Why choose GlobalData’s thematic engine?

Viewing the world’s data by themes helps decision making
We define a theme as any issue that keeps a CEO awake at night. GlobalData’s thematic research ecosystem is a single, integrated global research platform that provides an easy-to-use framework for tracking all themes across all companies in all sectors.

It has a proven track record of identifying the important themes early, enabling companies to make the right investments ahead of the competition to secure that all-important competitive advantage.

Traditional research is poor at picking winners and losers
The difficulty in picking tomorrow’s winners and losers in any industry arises from the sheer number of technology cycles – and other themes – that are in full swing right now.

Companies are impacted by multiple themes that frequently conflict with one another. What is needed is an effective methodology that reflects, understands and reconciles these conflicts.

That is why we developed our “thematic engine”
At GlobalData, we have developed a unique thematic methodology for ranking all companies in all sectors based on their relative strength in the big investment themes that are impacting their industries.

We rate the performance of the top 1,000 companies against the 50 most important themes impacting those companies, generating 50,000 thematic scores. The algorithms in GlobalData’s methodology produce thematic scorecards which help to identify the long-term winners and losers across 51 sectors.
What questions do thematic scorecards answer?

Our thematic scorecards identify tomorrow’s winners and losers in every sector based on their competitive position in the top 10 themes disrupting their sector.

“How should I position myself for the future?”

The data in this thematic scorecard was correct at the time of publication in April 2020 and is shown for indicative purposes only.
The primary purpose of thematic scorecards is to pick tomorrow’s winners and losers in each sector.

Our thematic scores are supported by 25 million data items tagged to themes.

---

**For investors**
To make the right investment decisions.

**For corporations**
To stay relevant in an uncertain world by investing in the right themes.

**For professional services**
To compare companies and sectors within a consistent framework.

**For tech vendors**
To demonstrate strength in disruptive tech themes.
The top-ranked companies in mining

Our thematic scorecard ranks companies within a sector on the basis of overall leadership in the 10 themes that matter most to their industry, generating a leading indicator of future performance.
